

Machine Learning in Production Navigating Conflicts in (Student) Teams

Assigned Seating (only today)

1. Find your team number
2. Find your team in the room (low numbers near the front)
3. Introduce yourself to the other team members

Now: First Short Team Meeting (10 min)

- Find your team number and seat area
- Meet your team, introduce yourself: Name, SE, ML, leadership, teamwork background? Favorite movie? Fun fact?
- Find time for first team meeting in next few days
- Agree on primary communication until team meeting
- Pick a movie-related team name (ask an LLM if needed), post team name and tag all group members *and your mentor* on slack in #social

Mentor	Team Nr
Vedika Agarwal	1-4
Yubo Chen	5-8
Shreya Verma	9-12
Juan Ortega	13-16
Ashritha Gonuguntla	17-20
Ansh Mishra	21-24
Akshita Verma	25-28
Sumanth Yegurla	29-32 3

Teamwork is Inevitable

Teamwork is crosscutting...

Teams are Inevitable

1. Projects too large to build for a single person (division of work)
2. Projects too large to fully comprehend by a single person (divide and conquer)
3. Projects need too many skills for a single person to master (division of expertise)

Interdisciplinary Teams are Inevitable

The Importance of Teamwork Skills

Virtually all software projects are done in teams

ML-enabled projects need to bring together different backgrounds

Good teams make it fun to work together

Learn from each other

Limited influence in selecting/firing team members in most organizations

Peer performance evaluations common in industry (e.g. [Google's Process](#))

How does AI change teamwork?

Teams are Inevitable even with AI

1. Projects too large to build for a single person (division of work)
 - a. Ambition rises with AI capabilities
 - b. AI shifts but does not eliminate all work; verification/control bottleneck
2. Projects too large to fully comprehend by a single person (divide and conquer)
 - a. Even without code-level comprehension, human control is likely needed
 - b. Managing risks still requires expertise
3. Projects need too many skills for a single person to master (division of expertise)
 - a. Domain knowledge, tacit knowledge, expert judgment/taste still valuable

Who has had bad experiences in teams? Student teams? Teams in industry?

Common Team Issue: Groupthink

Team issues: Groupthink

Groupthink

Group minimizing conflict

Avoid exploring alternatives

Suppressing dissenting views

Isolating from outside influences

→ Irrational/dysfunctional decision making

HIPPO

Example: Time and Cost Estimation

Example: Use of Hype Technology

(agile, block chain, machine learning, devops, AIOps, ...)

Causes of Groupthink

High group cohesiveness, homogeneity

Structural faults (insulation, biased leadership, lack of methodological exploration)

Situational context (stressful external threats, recent failures, moral dilemmas)

Symptoms

Overestimation of ability: invulnerability, unquestioned believe in morality

Closed-mindedness: ignore warnings, stereotyping; innovation averse

Pressure toward uniformity: self-censorship, illusion of unanimity, ...

Diversity

*“Men and women have different viewpoints, ideas, and market insights, which enables better **problem solving**. A gender-diverse workforce provides easier **access to resources**, such as various sources of credit, multiple sources of information, and wider industry knowledge. A gender-diverse workforce allows the company to serve an **increasingly diverse customer base**. Gender diversity helps companies **attract and retain talented women**.”*

*“Cultural diversity leads to **process losses** through task conflict and decreased social integration, but to process gains through increased creativity and satisfaction.”*

Groupthink and AI

- Need of AI
- Selection of learning method
- Narrow view of fairness
- Missing safety requirements
- Ignoring ethics

Mitigation Strategies

Mitigation Strategies

- Diversity in team composition
- Culture of open conflicts
- Appoint devil's advocate in discussions, moderate and rotate speaker order, leaders hide opinions in discussions
- Involve outside experts
- Always request a second solution
- Monitoring and process measurement
- Agile techniques as planning poker, on-site customer

Common Team Issue: Social Loafing

Team issues: Social loafing

Social Loafing

People exerting less effort within a group

Reasons

- Diffusion of responsibility
- Motivation
- Dispensability of effort / missing recognition
- Avoid pulling everybody / "sucker effect"
- Submaximal goal setting

“Evaluation potential, expectations of co-worker performance, task meaningfulness, and culture had especially strong influence”

Mitigation Strategies

Motivation

Autonomy

Mastery

Purpose

Mitigation Strategies

- Involve all team members, physical colocation
- Assign specific tasks with individual responsibility
 - Increase identifiability
 - Team contracts, measurement
- Provide choices in selecting tasks
- Promote involvement, challenge developers
- Reviews and feedback
- Team cohesion, team forming exercises
- Small teams

Responsibilities & Buy-In

Involve team members in decision making

Assign responsibilities (ideally goals not tasks)

Record decisions and commitments; make record available

Debugging Teamwork in Student Teams

Who has had bad experiences in teams? Student teams? Teams in industry?

Some past complaints

"M. was very pleasant and would contribute while in meetings. Outside of them, he did not complete the work he said he would and did not reach out to provide an update that he was unable to. When asked, on the night the assignment was due, he completed a portion of the task he said he would after I had completed the rest of it."

"Procrastinated with the work till the last minute - otherwise ok."

"He is not doing his work on time. And didnt check his own responsibilities. Left work undone for the next time."

"D. failed to catch the latest 2 meetings. Along the commit history, he merely committed 4 and the 3 earliest commits are some setups. And the latest one commits is to add his name on the meeting log, for which we almost finished when he joined."

"Unprepared with his deliverables, very unresponsive on WhatsApp recently, and just overall being a bad team player."

"Consistently failed to meet deadlines. Communication improved over the course of the milestone but needed repeated prompts to get things done. Did not ask for help despite multiple offers."

Common Frustrations in Student Teams

No visible progress until last minute

Late work

Incomplete or low quality solutions at integration

Unresponsive team members

Passive, uninterested team members without initiative

Needs lots of reminding and help

Sources?

Common Sources of Frustrations

Priority differences ("10-601 is killing me, I need to work on that first", "I have dance class tonight")

Ambition differences ("a B- is enough for graduating")

Ability differences ("incompetent" students on teams)

Working style differences (deadline driven vs planner)

Communication preferences differences (avoid distraction vs always on)

In-team competition around grades (outdoing each other, adversarial peer grading)

Breakout: Pre-Mortem

Pick one of the scenarios (or another concrete problem that one team member faced in the past) and openly discuss proactive/reactive solutions

As a group, post and follow up in #lecture, tagging present team members and @mlipbot:

1. Brief problem description
2. What to do to avoid it in the first place
3. What to do when it occurs anyway

How would you handle...

One team member has very little technical experience and is struggling with basic Python scripts and the Unix shell. It is faster for other team members to take over the task rather than helping them.

How would you handle...

You divide the work and but when you try to integrate on the evening before the deadline you learn that one team member has failed to complete their part. They tried the day before, but got stuck with a dependency problem.

How would you handle...

After last minute stress at the last assignment, you team agrees to start earlier and to integrate at a milestone days before the deadline to leave a buffer. Yet you see little progress from half the team in GitHub and hardly anybody responds in Slack. Little is done at the agreed milestone. The work gets done before the deadline, but with the same stress as in the last assignment.

How would you handle...

This homework is low priority for one team member. They rarely contribute beyond the bare minimum at the last minute.

How would you handle...

This homework is low priority for one team member. They rarely contribute beyond the bare minimum at the last minute.

The rest of the team grudgingly compensates and achieves full points for the assignment. You do not feel comfortable criticizing the student as it may negatively affect their grade.

Summary: How would you handle...

1. One team member has very little technical experience and is struggling with basic Python scripts and the Unix shell. It is faster for other team members to take over the task rather than helping them.
2. You divide the work and but when you try to integrate on the evening before the deadline you learn that one team member has failed to complete their part. They tried the day before, but got stuck with a dependency problem.
3. After last minute stress at the last assignment, you team agrees to start earlier and to integrate at a milestone days before the deadline to leave a buffer. Yet you see little progress from half the team in GitHub and hardly anybody responds in Slack. Little is done at the agreed milestone. The work gets done before the deadline, but with the same stress as in the last assignment.
4. This homework is low priority for one team member. They rarely contribute beyond the bare minimum at the last minute. (The rest of the team grudgingly compensates and achieves full points for the assignment. You do not feel comfortable criticizing the student as it may negatively affect their grade.)

Difficult Conversations

Fixing Teamwork Problems

Need to address problems,
conflict avoidance does not work

Conversations can be unpleasant,
feel confrontational

Learn how to have **difficult conversations**,
useful life skill

Three parts

What happened. Team members often disagree about the facts. Each person thinks that they are correct. Do not try to prove who is correct. Try to learn how the other person sees the situation.

Feelings. Frustration, anxiety, and resentment are usually below the surface. If you ignore them, they come out in other ways, for example in tone or in silence.

Identity. A conflict can make a person ask, "Am I competent? Am I a good teammate?" This is why small disagreements can feel large. Expect this in yourself and in others.

Difficult Conversations: The Basics

- Focus on problem solving, not blame assignment
 - mistakes happen, look to the future

- Explain the problem, but focus on “I statements”, not “You statements”
 - Be specific not general
 - Focus on impact, not intent (do not assume intent from impact!)
 - E.g., “I noticed... and felt...” rather than “You did...”

- Recognize and accept each person’s perspectives and reality
 - Let them tell their story, share their perspective
 - Listen open-mindedly, without interrupting
 - Active listening: repeat in your own words what you heard (even if you disagree)

Breakout 2: Difficult Conversation

In small groups, try role playing based on the previously discussed scenario:

- Person 1: The problem still persists, getting seriously annoyed, now confronting Person 2
- Person 2: Not a big deal, not my fault, all a misunderstanding, and who are you to tell me what to do anyway
- Person 3: Observer, provides feedback afterward

Rotate roles and try again

For contrast, first try these strategies (both person 1 and 2):

- Confront people about what they did wrong
- Focus on technical details of what actually happened
- Let it escalate

Breakout 2: Difficult Conversation

In small groups, try role playing based on the previously discussed scenario:

- Person 1: The problem still persists, getting seriously annoyed, now confronting Person 2
- Person 2: Not a big deal, not my fault, all a misunderstanding, and who are you to tell me what to do anyway
- Person 3: Observer, provides feedback afterward

Rotate roles and try again

Now Person 1 try these strategies:

- Focus on problem solving, not blame assignment
- Explain the problem, but focus on “I statements”, not “You statements” (be specific not general, focus on impact, not intent)
- Recognize and accept each person’s perspectives and reality (let them tell their story, share their perspective; listen open-mindedly, without interrupting; active listening: repeat in your own words what you heard)

Team Citizenship/Peer Grading in this Course

Teamwork Policy in this Course

Teams can set their own priorities and policies – do what works for you. Experiment.

- Not everybody will contribute equally to every assignment – that's okay
- Team members have different strength and weaknesses – that's good

We will intervene in *team citizenship* issues!

Golden rule: Try to do what you agreed to do by the time you agreed to. If you cannot, seek help and communicate clearly and early.

Team Citizenship

- Be responsive and responsible
- Come to meetings on time, participate actively
- Stick to commitments, work on assigned tasks
- When problems, reach out, replan, communicate early, be proactive
- (Replanning and dealing with mistakes is normal)

We will adjust grades if complains about:

- Lack of communication
- Disrespectful or dismissive communication
- Not attending team meetings (without excuse)
- Blowing internal deadlines without communication
- Failing to complete agreed tasks without timely communication

Peer Grading Process and Support

We are here to help! Teamwork is a learning goal

TA assigned as mentor to every team, reach out for support

Team citizenship survey after every milestone

Debriefing with TA after every milestone, discuss how it went and how to improve

Adjusting grades based on survey and communication with course staff

The team member...

- ☐ ... was not responsive
- ☐ ... skipped team meetings without communicating an excuse or without attempting to catch up
- ☐ ... did not stick to commitments or did not work on agreed tasks
- ☐ ... did not completed the agreed tasks and also did not reached out when facing problems in timely fashion
- ☐ ... did not meet the agreed deadlines and also did not reached out proactively when this was not possible
- ☐ Other: _____

Rating *

- ☐ Good team citizen: Acted as a responsible team member together with the team
- ☐ Needs improvement: Generally acceptable team citizen, but with some problems impacting the team
- ☐ Deficient: Often unreliable as a team member, significant negative impact on the team
- ☐ Unsatisfactory: Severe and consistent team citizenship problems, severely impacting the team

Peer Grading Mechanics

- Survey with rating form and text field, explaining what the issue is
- We discard complains without explanation and those beyond team citizenship (e.g, regarding ability or effort)
- TAs can help to bring up issues during the debriefing meeting
- We will immediately adjust grade, forcing the issue in the team
 - See [form](#) to preview effects
 - Can lead to substantial grade adjustments (-10% to -50% common)
 - Instructors listen to appeals
- *If entire team agrees, this can be used to adjust grades for intentionally imbalanced contributions*
- Depending on severity, TAs will escalate to instructors

Team members: 5 ▼

	Rated by Team member 1	Rated by Team member 2	Rated by Team member 3	Rated by Team member 4	Rated by Team member 5	Indiv. Avg.	Team Avg.	Grade adjustment
Team member 1	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	100.0	97.6	+2%
Team member 2	Needs improvement (90) ▼	Good team citizen (100) ▼	Needs improvement (90) ▼	Good team citizen (100) ▼	Deficient (60) ▼	88.0	97.6	-10%
Team member 3	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	100.0	97.6	+2%
Team member 4	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	100.0	97.6	+2%
Team member 5	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	Good team citizen (100) ▼	100.0	97.6	+2%

Avoiding Adversarial Peer Grading

- Peer grading focuses only on team citizenship
- Comments are required for negative ratings and read by TAs and instructors
- *Avoid avoiding conflict*: Set high standards and give honest feedback *before* mounting frustration and spiraling problems
- *Avoid academic integrity violation*: Do not cover for team members who do not contribute at all. Let the instructors deal with it (including medical accommodations).

Beyond the comfort zone

[...] We encourage all team members to engage with topics beyond what they are already familiar with. For example, if a team member has previously used Prometheus for monitoring, they can likely do that part easily, but other team members may benefit from doing this as a new learning opportunity (possibly with the help of the experienced team member).

In milestone M1-M3, your team can get **up to 3 bonus points** each if you can convince your mentor during the debriefing meeting that you went beyond your comfort zone. We are looking for two things:

- Allocate work beyond existing strength/experience
- All team members have awareness of all parts of the project

Tips for Getting Started

Establish Communication and Meeting Patterns

- Agree on how to communicate in the team: Email? Slack? Whatsapp?
- Agree on communication expectation. Different people have different habits and expectations. Be explicit!
 - Read emails daily? On weekends?
 - Respond to urgent chat messages within 3h? Read old chat messages?
 - Be available for chat during certain hours?
- Find meeting times. Plan ahead or meeting as needed?
- Set **intermediate internal deadline** for integration
- Set realistic expectations: All have other classes and distractions; communicate availability openly
- **Write down expectations!**

Share the Work

- Team members have different strength and weaknesses – that's good
- Make use of individual strength of team members (split, pair up, help, ...)
- Usually somebody will take responsibility for team management tasks (e.g., schedule meetings, moderate, meeting notes, track work, reminders, check submission) or reporting
 - Team management is work too
 - Consider rotating

Maintain Accountability

- **Write down explicit deliverables: *Who does what by when***
 - Be explicit about expected results, should be verifiable
 - Track completion, check off when done
 - GitHub issues, Jira, Trello board, Miro, Google docs, Slack, ... – **single source of truth, with history tracking**
- **Complete deliverable list *during meeting*: everybody writes their own deliverables, others read all deliverables to check understanding**
 - if not completed during meeting or team member not at meeting, email assignment after meeting to everybody; no objection within 24h counts as agreement with task assignment
- **We will ask for evidence of this in assignments and during conflict resolution**

Some Communication Tips

- Focus full-group meetings on planning and reflection, meet in smaller groups for focused work
- Use Slack/chat deliberately
 - consider chat ephemeral, don't expect everybody to catch up on all old messages
 - separate social communication from work comm., urgent from not urgent
 - explicitly tag people if you need their input, enable notifications during "working hours"
 - discuss non-urgent, long-term things outside of chat associated with topic (issue tracker, Google doc, ...)
- Reserve time for socializing and celebrating success

Recall: Common Sources of Conflict

- Different team members have different working patterns and communication preferences
 - e.g., start early vs close to deadline; plan ahead vs try and error
 - e.g., react to every notification vs reduce distractions, read email once a day
 - **discuss and set explicit expectations; talk about conflicts**
- Different abilities, unexpected difficulties
 - work in pairs, plan time for rework and integration
 - replan, contribute to teams in different ways
 - **work around it, it's the team's responsibility**
- Unreliable team members, poor team citizenship
 - e.g., not starting the work in agreed time, not responding, not attending
 - have written clear deliverables with deadlines
 - **talk about it within team, talk to course staff, peer grading**

Summary

Teamwork is unavoidable, teams rarely fully self-selected, good teams are fun

Teamwork is hard, skills to be learned

Many well known teamwork issues, including groupthink and social loafing

Set explicit expectations for communication and work allocation

We focus on team citizenship and apply peer grading
